- 
- You can tell how the trend is going to be in a certain time frame very easily. For example, in 1-Minute timeframe, 4 trend indicators all display an UP signal. So, you can tell that the trend is going very strongly and we can open a Long position.
 - If in a certain timeframe, there are at least 3 UP signal then we can open a LONG position. If there are at least 3 DOWN signal, then we can open a SHORT position. In other situations, do not enter a trade.

- The indicator also tells you some very useful information about your account, high price, low price, open price of the day, the spread, the last price, the margin...
