Hedge10 **Best 10pips Strategy Ever Discoverd**

Welcome

You are about to learn the easiest and almost risk-free method of scalping 10 pips from any currency pair everyday! I call it the Hedge10 Strategy

This is a very simple intra-day “set & forget” forex strategy. In fact it is so simple, I don't even want to call it a trading strategy. I am using Hedge10 everyday and I have achieved much success with it. I hope you use it and share the same success together with me

I have written this Report on the basis that you know at least the basics of forex trading. However, if there is anything that you do not understand and want further information or explanation, there are some resources below that could help you get started with Forex.

<http://babypips.com>

<http://forexfactory.com>

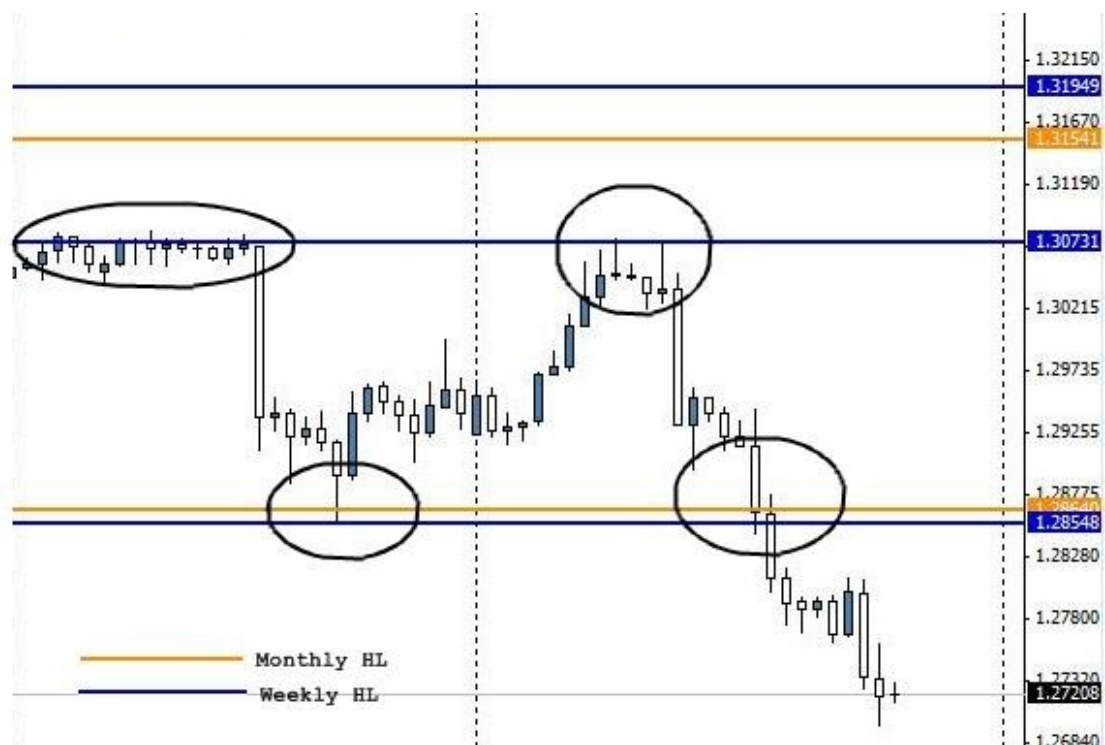

Introduction

The Hedge10 is designed to capture 10 pips from any currency pair. I basically trade the GBPUSD and the EURUSD with it.

Logic and Idea behind Hedge10

If you trade Forex, you will be familiar with the various important price levels. They include Weekly highs and lows; Monthly highs and lows; Pivots Points Daily highs and lows etc...

What happens when price meets these levels? Well, you can be sure there will be much activities going on... Because Traders from all over the world are watching these levels. There will be lots of price action around these important levels. They will either Break through or bounced off... right? Take a look at recent Monthly and Weekly High Lows levels

So how are these levels being traded? Traders will place set & forget pending limit or stop orders while the more experienced traders will confirm these breakouts or bounce offs by using their own methods like Price actions or indicators.

If you look at the chart below, it describes a typical Fake breakout of the Daily High. If you had traded this Breakout, you may have just lost some money but if you had placed a Sell limit order at the High, you will be laughing all the way to the bank with this trade...

The logic behind Hedge10 is to place a Sell Limit order and a Buy Stop order at the High and a Buy Limit Order and Sell Stop Order at the Low (with a fixed Stop Loss and Take Profit) at these important levels.

So that when your Buy Stop Order is hit, your Sell for Limit order gets hit too and so you are hedged. Place a Take Profit of 10 pips more than the Stop Loss.

With the positions hedged at these important levels, it doesn't matter which side of the market is going. As long as one side hits your Take profit, you get 10 pips... Are you seeing the picture here? Are you even excited about it yet?

I personally trade Hedge10 using the previous Day high and Low levels because I want action everyday, unless that trading day happens to be in a tight range (Inside Bar).

Now lets see Hedge10 in action with the Daily High Low. We will use the above chart to illustrate.

Previous Day's High: 1.38925

Previous Day's Low: 1.37228

Buy Stop order was place at 1.38925. At the same time, place a Sell limit at 1.38925. (Assuming no spread for easy calculations. You can add in spread to the Profit target so you can nett 10 pips). Both orders' Stop Loss and Take profit were set at 30 & 40 respectively.

Do so for the Previous day's low as well with a Sell Stop and Buy Limit Order.

After you set the above orders, you may turn off the computer and check back at the end of the day. 90% of the time, you win...

This was what happened...

The above scenario gave us 150 pips from our Sell Limit but that's not what Hedge10 is about...

Hedge10 gives you a 90% win rate getting 10 pips a day for just a single currency pair. You may use more pairs for more profits.

Now before you start thinking about your million dollars, there are some risks using Hedge10

There will be times when you will experience a whip-saw, meaning you get stopped out at both levels for a -60 pips but very rarely...really. Manually back testing the last 6 months Hedge10 was whip-sawed 4 times but as you can see, the rewards surpassed the risks.

Another risk is Brokers' risk. Once your Broker discovers what you are doing especially if you are making 30 pips (assuming you trade 3 pairs) everyday for the past 100 days, they may try to be funny. One way to get around this is simple. Just open 2 Forex accounts with 2 different Brokers but with the same spread. One account is to place all the Limit Orders and the other for Stop Orders.

Well, that's all there is to Hedge10. I am confident that you will like this Method and profit from it. Stay persistent, review the rules and do manual back-testing to gain more confidence.

Happy Trading,

Drew
