Congratulations! You just qualified for your FREE Moneymaking robot setup!

We are very excited that you qualified as an individual who is ready to take his moneymaking future to the next level! An E-mail has been dispatched to our tech team over at IAMFX and they are in the process of setting up your custom virtual private server (needed so your robot can make money for you even when your own personal PC is switched off).

Here is what to do next:

All you need to do now (and I promise this IS the last step!) is to open and fund a live brokerage account at [lamfx Brokerage](#) using the same E-mail you have used to signup for your free AiCashrobot. The minimum deposit is as low as \$500 USD for micro accounts.

Why do you need to fund it?

First and foremost all robots require cash to work with (you need to multiply your deposit don't you?)

Secondly, the free lamFX VPS is provided to live deposit clients who maintain minimum trading volume required to cover the costs of internet machine. In case you don't want to trade real money and prefer trading on demo - there would be a small fee every month for the server that is being deducted (around 35 USD) to cover the costs for your internet machine.. and cover the costs **ONLY!**

We do not earn anything, broker earns nothing and this comes at no cost to you. This is literally a hassle free win win proposition . We save you from.a) having to install the robot yourself and b.) have your pc turned on all day long consuming its life and wasting away your internet bandwidth.

Remember: You can set your Robot to trade DEMO (paper trade) too, until your satisfied it's actually earning you loads of money. Once you feel comfortable you can switch on the REAL money mode and.. there you go!

Again we are confident we can make a serious difference in your life and thank you for being part of this! It's a honor for us to have you onboard this ride and we'll make certain you are on a path to earn substantial income VERY VERY soon!

So go ahead, open the new [lamfx](#) Trading Account, fund it, get your free VPS and let the lamFX technicians activate AiCashRobot for you!

And remember, if you get lost and need some help along the way – our support is ready and willing to help you. You can always reach us by email: support@aicashrobot.com

Your partners,

Steve, Mike and Uli

1. Opening a new account at IamFX brokerage

Iamfx.com is a AICASHRobot friendly brokerage. They provide low spreads on all currency pairs and excellent trading conditions – fast execution!

Forget about all the hassles with MT4 setup, EA installations and activations. AiCashRobot comes fully preinstalled on the Iamfx award winning web browser VPS. To trade AiCashRobot you don't even need a home computer! You can access your VPS with the robot from any place in the world simply by using any connection from anywhere which has a web browser!

Before you start trading with AICASHROBOT you need to open a funded IAMFX trading account.

[Click here](#) to start the application. You will have to fill several fields and submit some documentation for compliance. You must use the same email that you used for AiCashRobot application.

If you encounter any problems opening your account feel free to contact IamFX support directly here: <http://iamfx.com/contact.php>

Account Information

Account Type: <div>Individual</div>	Estimated Deposit Amount: <div></div>	Minimum deposit for standard account is \$2,500 USD Minimum deposit for micro account is \$500 USD
--	--	---

2. Funding lamFX brokerage account

Once your live account is opened and confirmed you can fund your account. The minimum deposit is \$500 USD. You can learn more about the deposit options here:

<http://iamfx.com/iamfxaccount.php>

Remember you are not required to trade with real money. You can trade using a Demo account as long as you want. The deposit is required to receive the web-browser VPS from lamFX.com

If you encounter any problems funding your account feel free to contact lamFX support directly here: <http://iamfx.com/contact.php>

3. Requesting Free IamFX VPS

Once your live account is funded you can request your free web-browser VPS from IamFX. The VPS will be totally free for you if you maintain the minimum trading volume to cover the costs of the virtual server. In case you prefer trading Demo only, there is a small fee will be deducted from your account to cover the cost of the VPS.

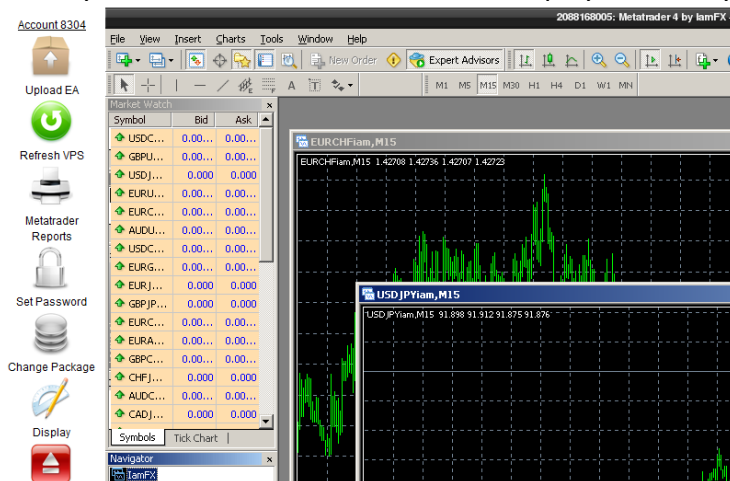

You can read more about the great features of IamFX VPS here:

<http://iamfx.com/vpshosting.php>

Once your VPS is ready you will receive the login information from IamFX support so you can login to your trading account via your VPS from any Web-browser! No software installation is required!

The fully functional Metatrader4 will be displayed directly in your browser.

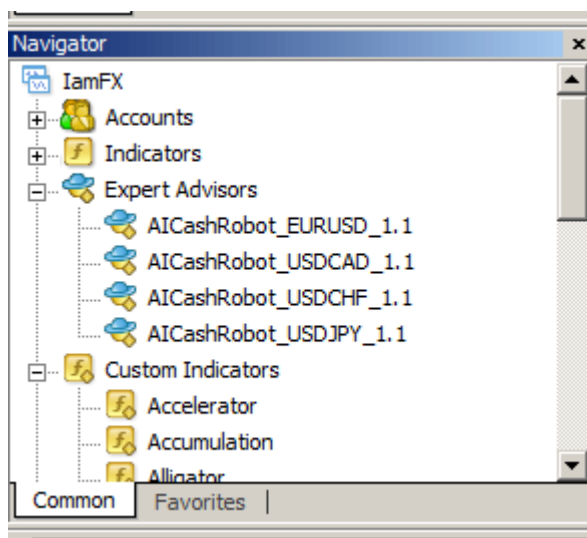

4. Installation of AICashRobot on your VPS

Once you receive the VPS login information you should wait for AICashRobot installation.

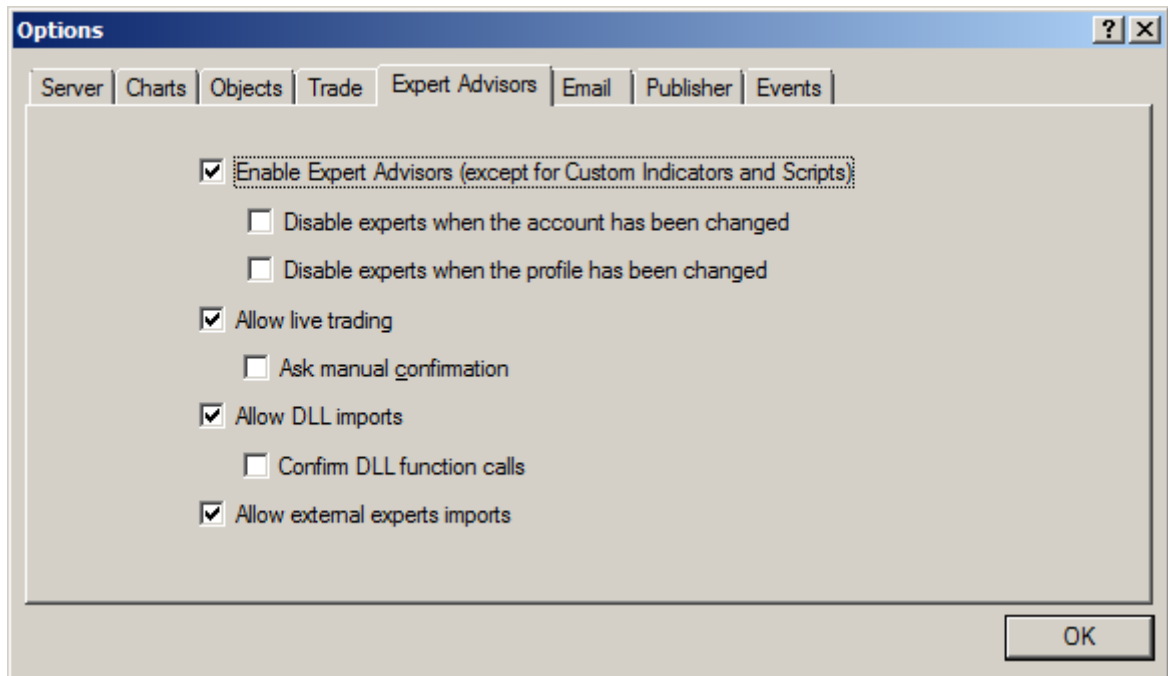

Normally IamFX technicians receive your qualification email automatically and setup your AICASHRobot on your VPS within 48-72 hours. In the event you don't hear from them, please contact them directly at newaccount@aicashrobot.com with your personal details.

Once your AICASHROBOT is installed you will find it under the Navigator TAB in your metatrader on your VPS:

5. Configuring Metatrader on your VPS

Log in to your VPS and click on Tools -> Options -> Expert Advisors Tab in MT4. Make sure that proper checkboxes are checked and unchecked accordingly to the following screenshot:

Then Click OK

6. Starting Trading with AICashRobot on your VPS

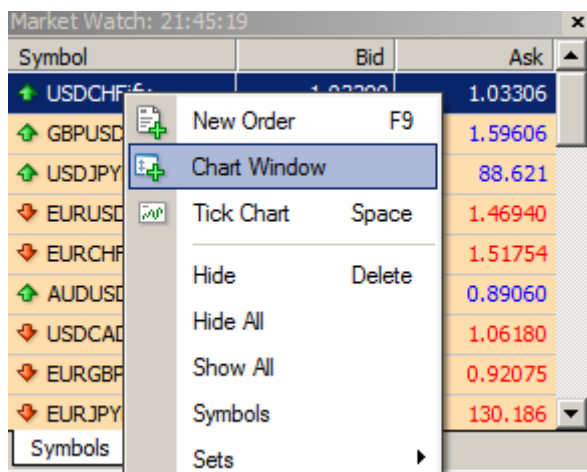

First you need to decide if you want to trade Demo or Live account. You can log in to your live account inside the Metatrader (FILE - > Login) or open a new demo account there.

Remember you can trade only one account but multiple EAs on your VPS.

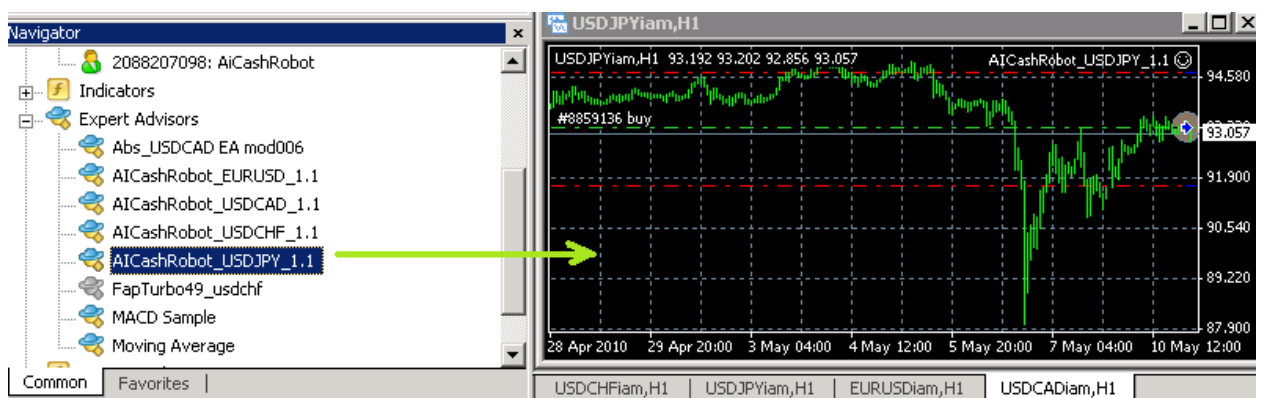

First open the charts that you want to trade. AICashRobot can trade 4 currency pairs on 1H Timeframe:

- USDJPY
- EURUSD
- USDCHF
- USDCAD

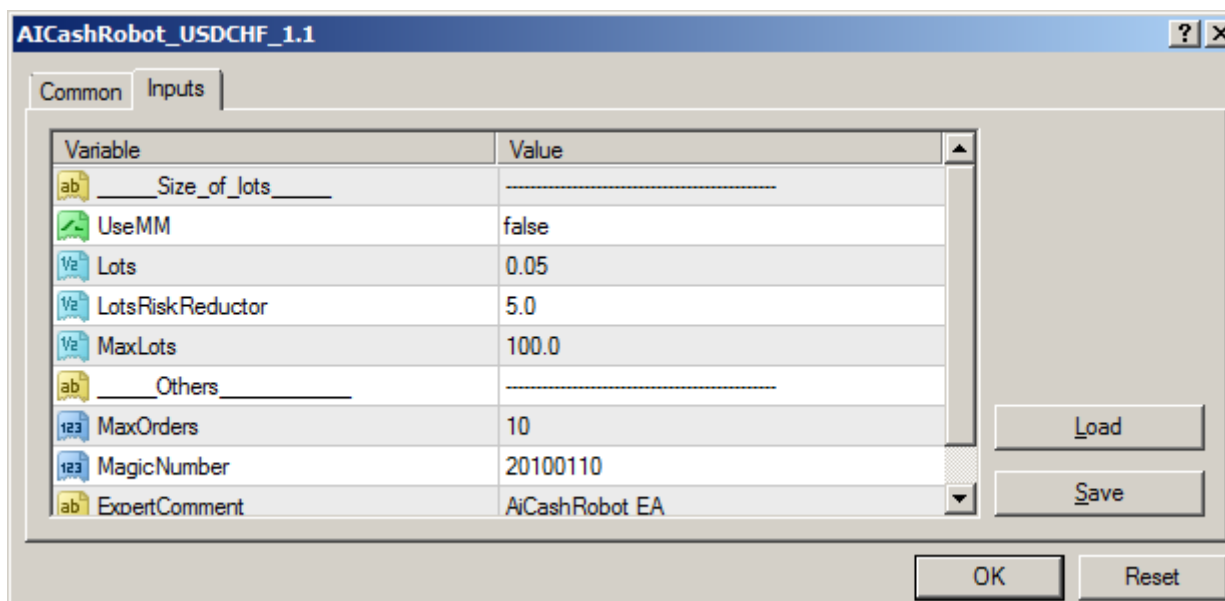

Right click on the currency you want to trade and open the Chart window. Make sure that timeframe is set to H1 (1 hour)

Drag and drop the AICASHRobot to the chart you want to trade:

The settings window will appear to let you choose the robot settings.

- Use MM – Defines the money management. If it is FALSE then the manual lot size (LOTS) will be used to open the new positions. You can set it to TRUE if you want to use automatic money management.
- Lots – sets fixed lot size in case you don't want to use automatic money management
- LotsRiskReductor sets the percentage of available margin that will be used to open the new trade. We recommend not setting any more than 3-5.
- MaxLots – defines the maximum lot size for the automatic money management. It is not used if UseMM=false
- Max Order – defines the maximum number of orders per each currency pair. Make sure your MaxOrders is small if your account is small, otherwise the account will be wiped out by opening too many trades.
- Magic Number is used to help robot identify its trades.

We believe that you should use minimum lot size to stay on the safe side. The following table could help you understand the suggested money management:

Deposit, \$ USD	Number of currencies to trade	Lot size per currency	Max Orders per currency
500	1	0.05 or less if available	1-3
1000	1-2	0.05 or less if available	1-5
2000	1-3	0.05 or less if available	2-5
5000	2-4	0.05	3-7
10,000	2-4	0.05-0.1	Up to 10
50,000	4	0.25-0.5	Up to 10
100,000	4	1	Up to 10

Make sure you use the amount of risk which is equal to that of your trading capital. If your risk is greater (for example set too high lot size or too many Max Orders) your account will be in jeopardy of being wiped out.

FREQUENTLY ASKED QUESTIONS

Which currency to trade?

This is up to you. All 4 currencies have shown decent profit using a 5 year backtest however it's impossible to predict which pair will be the most profitable in the future.

You should estimate your performance on a monthly basis (not weekly or daily) because this is a long term trading robot, not a scalper. It can have a losing week or two but the long term predictive success is extremely likely.

You can always drop the losing currency pairs and enable the winning ones. Just because AICashRobot has four pairs does not mean you need to trade all of them.

Can I backtest AICashRobot?

Yes, AICashRobot is not a black-box and can be backtested. However we don't provide the support on how to perform backtesting. You can contact the IamFX support to learn more about backtesting using IamFX. You can also see previous backtests which are available on the AICASHRobot home page.

What is the strategy behind the robot?

AiCashRobot is doing all the guess work and trading for you on the autopilot even if you don't have any trading skills at all! And here is why: AiCashRobot strategy is built based on advanced artificial intelligence engine BB-2.11 which is one of the best and most sophisticated trading engines nowadays. The strategy is based on the price channel breakouts and trend following algorithms. The basic model trades 4 major currency pairs which are EURUSD, USDCHF, USDCAD, USDJPY with the possibility of expanding the number in future.

AiCashRobot uses dynamic takeprofit and stoploss feature - it means it adjusts StopLoss and TakeProfit levels automatically depending on the market situation! This helps to cut the losses if the price goes against us and increase the profits significantly when the price moves in favorable direction!

The main advantage of the strategy is a great Risk:Reward Ratio. It varies from 1:1 to 1:3 here which means for every pip risked may gain up to 3 pips of profit! Forget about the scalpers with awful risk reward ratios where you risk 300 pips to gain mere 10 pips.

Like Fapturbo robot, AiCashRobot uses sophisticated time filters as well however it is not an Asian session scalper which means it can trade outside of the Asian session with more liquidity! Among its pairs are EURUSD and USDJPY - which have great liquidity and low spreads so spread is not an issue here.

Will the robot expire? Do I need to renew it every month?

AiCashRobot robot never expires and always kept up to date by developers! By offering robot preinstalled on VPS the developers have a chance to keep it up to date with the modern market conditions.

As you know Forex market is very dynamic and never stays the same. Even the best robots get outdated very fast so the careful monitoring and optimization is needed to keep the robot profitable. Of course small trader does not have time and resources to perform sophisticated reoptimizations every week, that's why the developers do all this work for you! We constantly monitor the robot performance and if needed perform the reoptimizations on the global servers to ensure the best performance.
