

Forex Secret Agent Alert – User Manual

Hello,

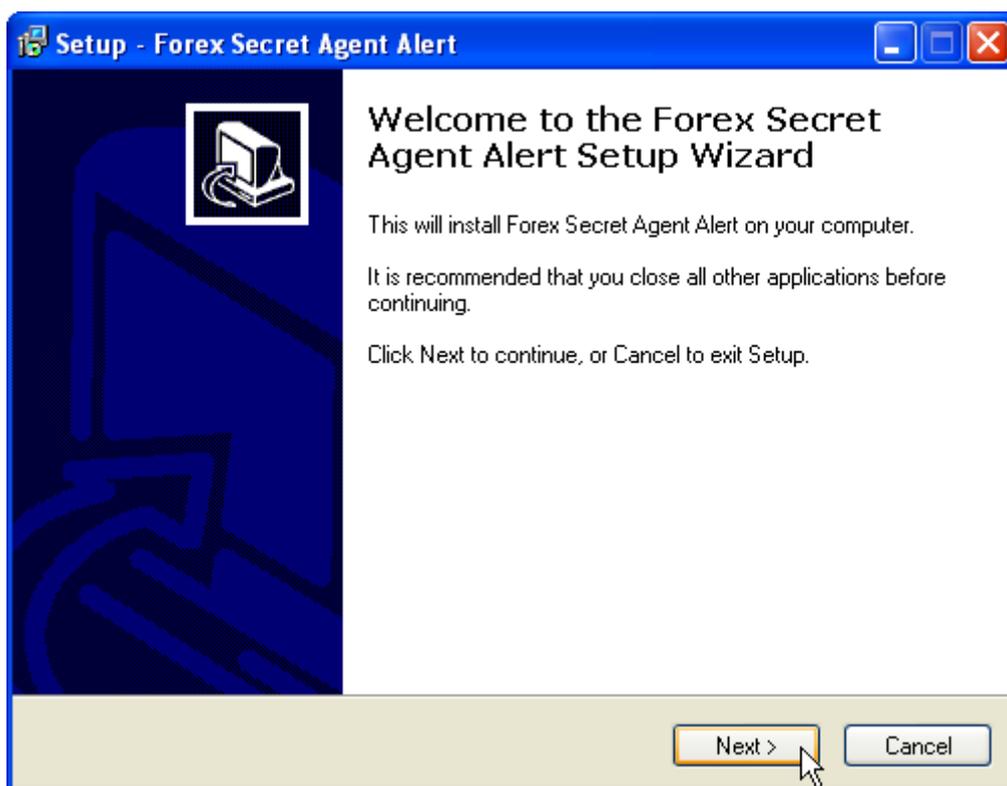

First of all, I'd like to thank you for purchasing the Forex Secret Agent. From now on, be ready to see how the real traders get their hands on the real profits.

First, let's install the software to your computer:

(Note: the following steps are identical for all Secret Agent products – the alert software, advanced alert software, Trade Management Robot)

Double-click the file: **SecretAgent_Alert-Quick_Install.exe**

You'll see the following screen:

Click Next, then click the Browse button to find the folder where you installed MetaTrader.

This folder is found under the Program Files folder, which is usually under the C: hard drive:

C:\Program Files\MetaTrader Folder\

For example:

C:\Program Files\MetaTrader - Alpari UK

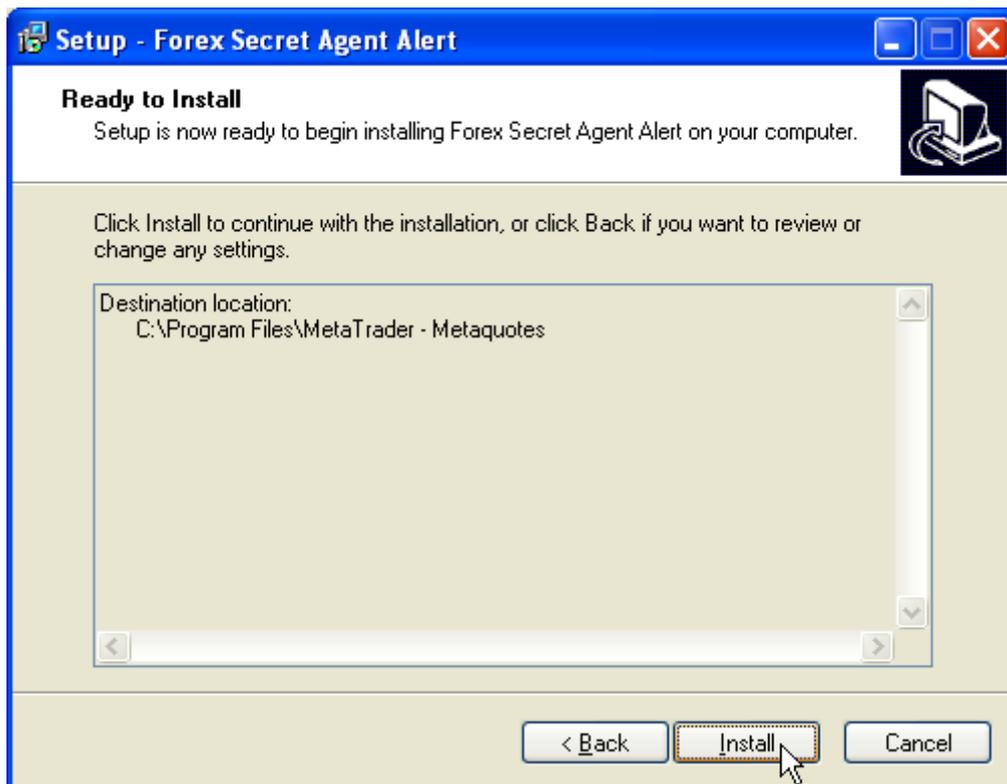

C:\Program Files\Interbank FX Trader 4\

etc...

So, click the Browse button to find this folder:

When finished, click Next, then on the Install button:

That's all – you now have the Forex Secret Agent Installed.

Let's learn how to use the software:

First, I just want to say that this is my original creation. I promise you will be shocked when you start using it. But you must promise me that you will keep it secret, as it is my FOREX SECRET AGENT ☺.

In this book, I will teach you step by step, what you should do to obtain maximal profits from this strategy.

The Forex Secret Agent indicator can be used on the next currency pairs:

GBPUSD

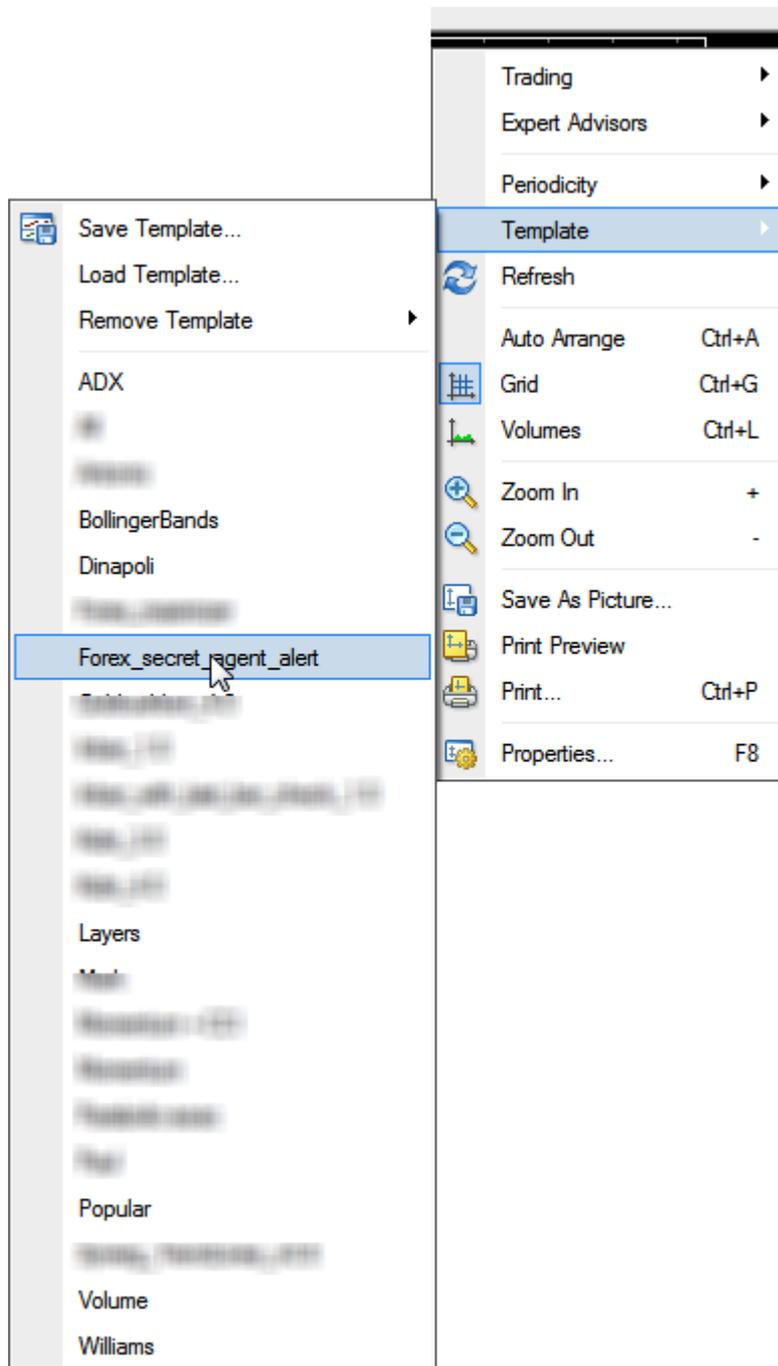

EURUSD

EURJPY

And on the following time frames: 15 min, 1hour, 4 hour charts.

So go to your platform and choose one of the required charts.

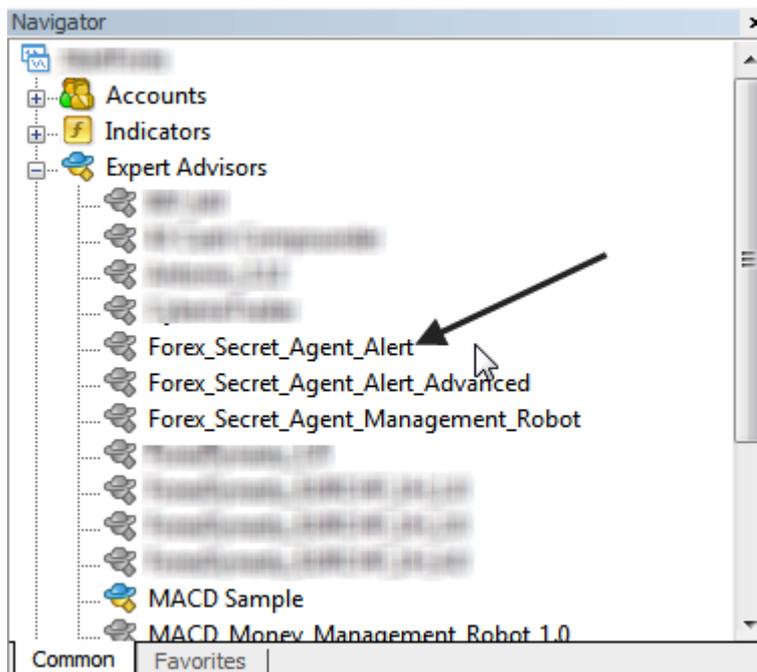

After opening the chart, go to your templates list and choose the forex_secret_agent_alert template:

Then you will see this template on your chart:

After you chose the template, you need to apply the alert software to the chart. To do it, go to the EXPERT ADVISORS list that you can find in the navigator window, and choose the forex_secret_agent_alert.

When you do it you should make sure you can see the smiley on the right upper side on the chart:

Note: the software is a MetaTrader Expert Advisor (EA), although it is not a trading robot, and does not open trades on its own.

That's all! Now you are ready to use my strategy!

For my awesome strategy I use the PARABOLIC SAR, the GATOR indicator, and the WR indicator.

BUT, the most important thing is, you don't have any reason to worry about - I did the job for you!

You will get ALERTS, so you'll never need to sit close to your computer screen and wait till all the conditions are met! I've built this automatic alert for you, so you can get the alert, come to your platform and open the recommended trade.

When you get the alert it looks like this:

You can see that the blue thumbs up icon shows the recommended direction, the entry price which is marked with blue line, the stop loss marked by the red line and the final profit target that's marked by the green line.

So all you have to do, is open the recommended trade.

As an addition you can see on the top right corner, written in red: **recommended entry point level, SL, TP**, so you can easily use this information to enter your trade.

You can see on the top left the signal information as well:

```
GBPUSD,H1 1.6341 1.6378 1.6339 1.6356
Copyright © 2010, www.ForexSecretAgent.com
Forex Secret Agent Alert ver 1.0 © Build 01
=====
ALERT INFORMATION:
Recommended Entry Point 1.6358
Recommended StopLoss 1.6210
Recommended TakeProfit 1.6506
Current.Broker.Spread 3.00
Current Trend Direction UP
```

So there is no way you'll miss it 😊

When you set the target price (Take Profit) I recommend the following:

Open 2 identical positions, set the same SL for both of them, but for one set the recommended take profit, and for the second trade set a take profit that is half the amount of pips than the recommended.

For example, look at the picture above: the entry point is 1.6358 and the SL is 1.6210, it is 148 pips. For the second target, set 74 pips as the take profit.

This is all you need to know to use the Forex Secret Agent.

Now go on and maximize your profits.

I remind you that you can this strategy on the following pairs:

GBPUSD

EURUSD

EURJPY

And on the following timeframes:

15 min

1 hour

4 hours

If you want to use it for more currencies you can get it in my advanced software: Forex Secret Agent Advanced.

Also, if you'd like to use a robot to manage the trade for you after you entered it (like I do), get my Forex Secret Agent Trade Management EA.

I wish you good luck, and profitable trades.
